

REVOLVER

HIGH QUALITY AUDIO

Phono 2 Pre-amp

Features

- Accepts low (20 Ohms) and high (100 Ohms) input impedance.
- High and stable performance with low noise and high gain.
- Moving Magnet / Moving Coil switchable.
- Input / Output through gold plated Phono sockets.
- Stylish, strong metal case.
- Adjustable output level.

The Revolver Phono 2 Pre-amp is a stereo device that can be used to boost the output of both MM and MC phonograph pick-up cartridges to allow use with any audio amplifier or receiver that lacks a Phono input.

Unique switching and separate input Phono sockets allows connection of either one turntable with interchangeable MM or MC cartridges, or simultaneous connection of separate MM or MC turntables thus providing the ability to make comparisons or match a preferred cartridge type to an album being played at the flip of a switch.

The Revolver Phono 2 Pre-amp combines high quality with low audio distortion, wide frequency response and low noise.
